

## MOD INFORMATION CARD

*Grand Theft Auto V*  
*ASI Script Modification*

### **PLD – Player Location Display**

**VERSION:** V4.00

**RELEASE:** 2016-NOV-11

**COMPATIBILITY:** GTAV-PC

**REQUIREMENTS:** Any GTAV ASI Script hook

---

#### **DESCRIPTION**

- PLD displays the player's current in-game location on the screen.
- Location includes street name or intersection, district name, and region.
- PLD also displays the current in-game time.
- PLD allows the user to toggle the size of the radar and provides some informative multiplayer features.

---

#### **CHANGELOG**

- Fixed issue where disabling the radar zoom feature would not always work as intended.
- Added option to allow or disallow controller use for PLD.
- Changed controller button for PLD radar zoom toggle to (A).
- Added game time display above location text.
- Added option to disable game time display.
- Minor fixes.

---

#### **NOTES**

- Consult the **FEATURE INFO** file to learn more about PLD and its features.
- It is recommended that you disable subtitles (PAUSE > SETTINGS > DISPLAY > SUBTITLES) when using PLD to prevent overlap.

---

#### **INSTALLATION**

- A GTAV Script hook must be installed for any .asi modification to work. The original may be found [here](#).
- Using script modifications in GTA Online can result in a temporary or permanent ban from the service.
- 1. Place the .asi and .ini files provided in the download inside your main GTAV game directory.
- 2. Modify the .ini file as you see fit.
- 3. Start your game.

---

#### **CREDITS**

- PLD is coded by Lt.Caine.
- Thank you to Alexander Blade without whose work scripting for GTAV would not be possible.
