# REQUIREMENTS

- Alexander Blade's ScriptHookV
- Addon Peds (make sure to install addon peds or the menu will be empty)

# INSTALLATION INSTRUCTIONS

- Install all the **required files**
- Extract **AddonsMenu.asi** in to your game's root folder (where GTA5.exe is located at)
- Done!

# HOW TO USE

You can enable the menu by pressing **F11** on the keyboard or hold **RB + X** on controller. (these can be changed on the bottom of the menu)

Once the menu is open you can press **Enter** on any of the installed Addon Peds shown in the available options to change your model.

# DESCRIPTION

Addons Menu is a simple GTA V menu with which you can change the player's model to an addon ped. This menu is based only on AB's ScriptHook, making it a lot simpler to change to the installed Addon Peds. Therefore PedSelector menu, NativeUI and ScriptHookVDotNet are not required anymore! So the menu works as a flexible alternative to PedSelector menu.

# CREDITS

- **alloc8or** for his contributions to the modding community and specifically for providing an up to date native database
- **Meth0d** for the Addon Peds support in GTA V
