

Installation

1. Place the "**world_Trade_Center_5**" folder into your resources directory.
2. Add the following line to your server.cfg file: ensure world_trade_center_5

And that's it! The installation is complete.

If You Encounter Any Issues

If you notice floating props in the sky or flickering objects, follow these steps:

1. Navigate to the "**Only if you have issues**" folder included in the mod.
2. Export all the .ymap files from this folder to:
resources/world_trade_center_5/stream/ymap

Once this is done... *BOOM*, everything should work perfectly like a fine-tuned Ferrari!
