

Notification News & Weather is a GTA V script that adds immersive, real-time news, weather, and temperature notifications to the in-game feed.
The script simulates live broadcasts such as police alerts, city news, emergency reports, weather updates, temperature reports, and real-time Wanted level notifications.

Features:

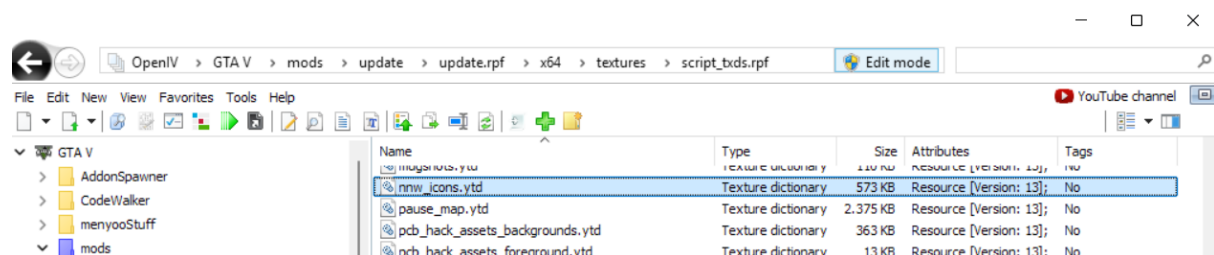

Dynamic news notifications (police, city, market, tech, etc.)
Real-time weather updates
Real-time temperature system (Celsius / Fahrenheit support)
Real-time Wanted level alerts
Civilian incident reports with automatic location detection
Custom category & temperature icons
Multi-language support (EN / ID / RU)
Configurable toggles (NoNews, NoWeatherForecast, NoTemperature, etc.)

Installation:

Copy NotificationNewsWeather.dll & NotificationNewsWeather.ini to
GTA V/scripts/

Copy the NNW_Data folder to
GTA V/scripts/

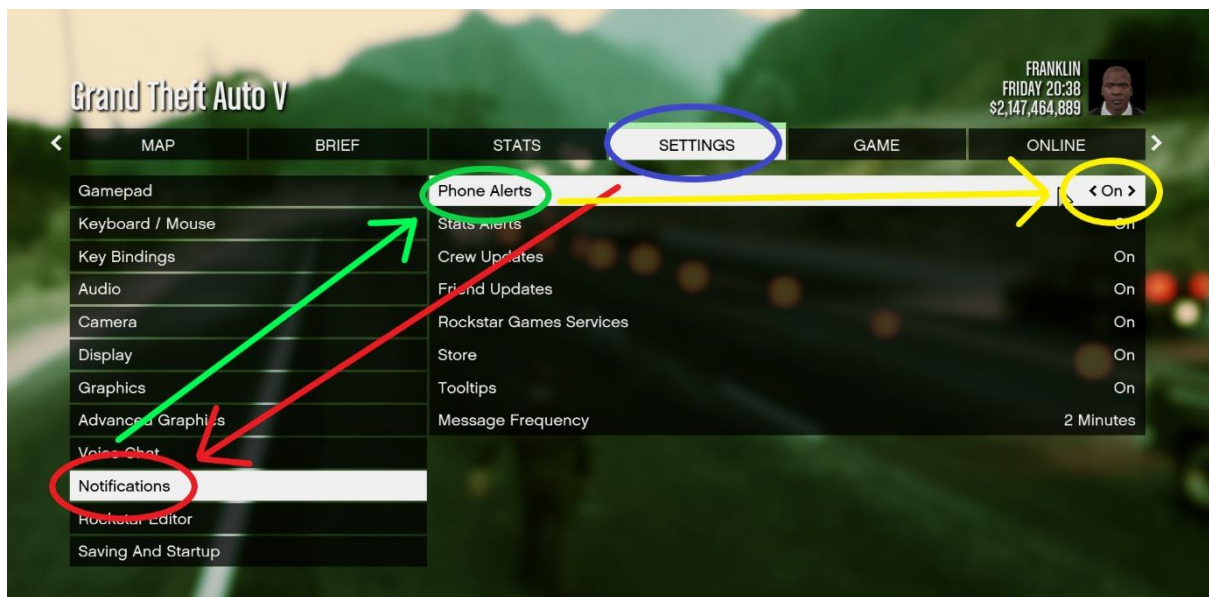

Using OpenIV, put nnw_icons.ytd into:
mods/update/update.rpf/x64/textures/script_txds.rpf/

Make sure Edit Mode is enabled in OpenIV.

Alert:

Turn On Phone Alerts!

=====

=====

Notes:

Wanted and Civilian notifications are priority-based
They are NOT affected by MinTime, MaxTime, or MaxNewsLines

Civilian alerts appear ~5 seconds after the incident
Wanted alerts appear ~10 seconds after the Wanted level stabilizes

Weather and Temperature can work independently
Temperature is dynamically calculated based on weather, time of day, and location

If notifications do not appear, make sure:
Game Menu → Settings → Notifications → Phone Alerts is turned ON

=====

=====

Requirements:

GTA V (Story Mode)
ScriptHookV
ScriptHookVDotNet 3 (Nightly recommended)

OpenIV
LemonUI
