Installation Instructions

- Download and install **ScriptHookV** by Alexander Blade.
- Extract "**SACheatSystemV.asi**" in to your GTA V game folder. This is the folder that contains **PlayGTAV.exe** file.
- Done!

How to use

It is really simple. Just like in GTA San Andreas, you can type any of the supported cheat codes and the cheat will be (de)activated. Keep in mind this mod disables the interaction menu and the alternate pause key (M and P respectively). This only happens for keyboard users.

You can find a list of the supported cheat codes in the “Supported Cheat Codes” folder.

Permission to share this mod

If you want to share this mod publicly on YouTube or other platforms, then please credit my work by leaving links to my social accounts.

Also, please DON'T PROVIDE alternative download links of this mod unless all links I have given are "dead". For convenience, you can copy/paste the following:

Description

GTA V is an amazing game. Although Rockstar did add cheats into this game, a lot of people have learned the iconic San Andreas cheat codes. This mod recreates a lot of the SA cheats into GTA V bringing back a lot of nostalgic memories.

Credits

I would like to thank the GTA V research community for providing the necessary tools to mod this game. This mod wouldn't be possible if it weren't for those people.

This mod was built using Alexander Blade's **ScriptHook SDK** and alloc8or's **native database**

.
